

TURNING YOUR VISION INTO SILICON

ASIC services

Microtest Group operates in the semiconductor ecosystem, providing high-quality Test Services, ATE, and ASIC design for the automotive, industrial, power, sensor, and healthcare markets.

With 25 years of experience in advanced performance, high parallelism, and automation, Microtest supports companies in optimizing operations and reducing testing costs.

Our expertise is built on well-developed skills, **gained through many years of work experience** with some of the **world's leading electronics companies** (such as STMicroelectronics, TDK, and Texas Instruments), as well as through **partnerships with universities and research institutes**.

Our core activities focus on the **conception and design of complex electronic systems**

and integrated circuits (ICs), starting from **system-level design** or application specifications up to **full support for the final development**.

Microtest Group also provides consulting on **feasibility studies** and **NPI (New Product Introduction)** for the launch of **innovative products to the market**.

Microtest Group's skills and expertise in **electronics and microelectronics circuit design** are guaranteed by many **proven successful results**, as well as **full customer** satisfaction and validated **silicon results** across different semiconductor processes for ICs or macro cell design.

Our flexible organization allows us to deliver **high-quality results while maintaining agility at competitive costs**.

SOLUTIONS

- ICs design service
- ICs layout service
- Electronic System development and design
- Feasibility study for new ASIC
- Full ASIC turn-key service

EXPERTISE

- Analog mixed signal design
- Power management
- Low power design
- Engineering support for product development
